Easily authenticate a person’s identity
As credit and hiring due diligence tightens, there comes financial and personal pressure that can increase the occurrence of fraud—i.e., using a child’s Social Security number (SSN) for the appearance of clean credit history. Equifax Verification Services delivers access to the most reliable data sources in an easy, cost-efficient tool for mitigating risk in your customer or employee-acquisition process. In today’s economy, that’s front-line assurance against fraud that corporations, investors and regulators demand.

Features:
- SSA Authentication Report—Requires a signed SSA consumer authorization form before it compares three key identifiers (name, date of birth and SSN) against the Social Security Administrations database, delivering a definitive match or no-match on identity
- SSA Death Master File Audit—The Social Security number will be screened to ensure that it does not belong to a deceased individual
- Identity Usage History—Provides multiple pieces of information on a Social Security number; if it is valid, where and when it was issued, any previous addresses, any additional SSNs that are associated with this consumer and if there are multiple identities

Identity assessment and authentication process

Authentication of the individual can be combined with verification of employment and income or fulfillment of tax transcripts and W-2s for the utmost in applicant credentialing—all in a single source, Equifax Verification Services.
